

# Stepwork!

Quick and Easy Illumination

# Block Sizes

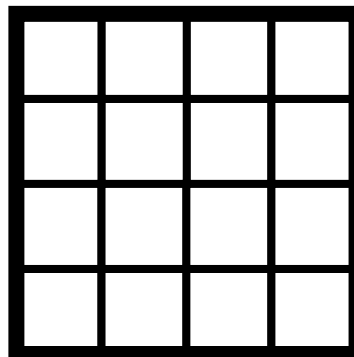

Always Squares

- 2X2

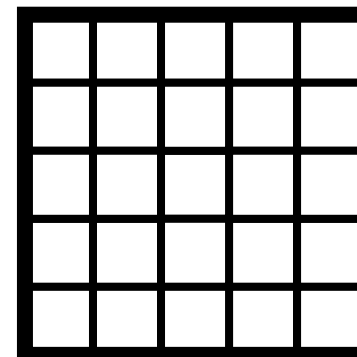

- 3X3

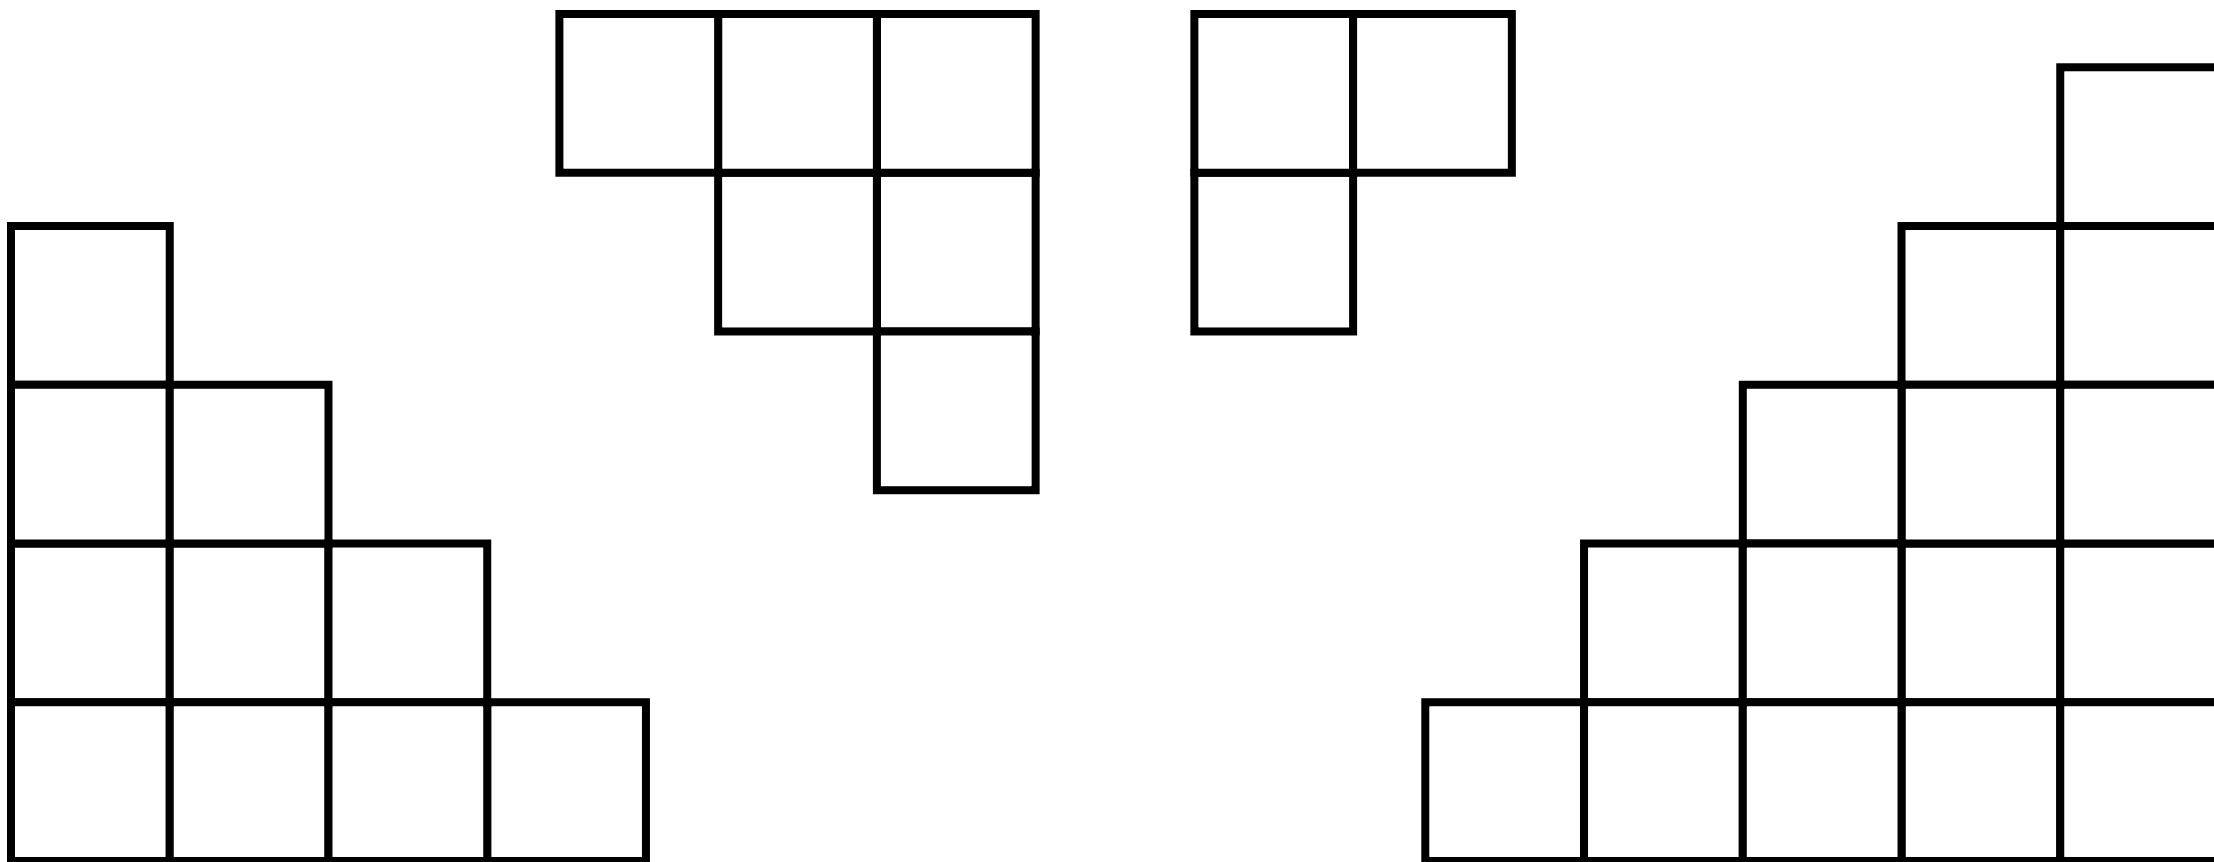

- 4x4

- 5x5

Why is it called Stepwork?

# Layout

Stepwork is formed by first selecting a block size. That will be tiled and repeated over the entire piece. The Step/ladder always goes in the corner of the block. However, any corner of the block will do. The steps almost never touch inside of a block, and so multiple steps are usually only seen on large pieces.

In addition to the Steps, blocks may also be adorned with 1x1 squares. To my knowledge, the squares mostly happen on the corners, although it is possible to put an arrangement of 4 squares inside a 5x5 block.

Blocks may also be divided diagonally, but always include Step/Square.

Thank  
You!
